input.1p

Java

```java
package q10771;

public class CalculateDifference {
    public static void main(String[] args) {
        // Convert the string values into integers
        int firstValue = Integer.parseInt(args[0]);
        int secondValue = Integer.parseInt(args[1]);

        System.out.println("The difference of args[0] and args[1] is: " +
                (firstValue - secondValue));
    }
}

```
